

EUCO P.V.A.50

Description Is medium viscosity polyvinyl acetate used primarily as an adhesive for wood parquet tile. It has flexibility and excellent tack.

To make it suitable for laying wood tiles, it exhibits high water resistance when used and it retains its adhesion even at constant exposure to varying humidity.

Physical Properties	Open time	20-30 minutes
	Appearance	clear
	When used	
	Flexibility	good
	Moisture	good
	Storage life	one year

Application Is easy to apply; pour sufficient amount on the concrete surface and spread roughly with stiff brush or a toothed trowel apply enough adhesive to the surface which can be covered within specified open time of the adhesive to attain maximum wetting of the tiles surface. After use, brush trowels, glue bath and other equipment should be washed clean with thinner before the adhesive dries.

Surface preparation Surface to be applied must be dry and clean, free from dust and loose materials to attain maximum adhesive must be shaken stirred before use.

Storage Keep containers closed when not in use. Use thinner to clean tools of excess adhesive.

Consumption 1 to 1.5 kg/m²

Package 1 kg, 4 kg, 20 kg, 100 kg drums.
